SECTION 10: Stability and reactivity**· 10.1 Reactivity**

No further relevant information available.

· 10.2 Chemical stability**· Thermal decomposition / conditions to be avoided:**

SADT (Self Accelerating Decomposition Temperature) is the lowest temperature at which self accelerating decomposition may occur with substance in the packaging as used in transport. A dangerous self-accelerating decomposition reaction and, under certain circumstances, explosion or fire can be caused by decomposition at and above the temperature. Contact with incompatible substances can cause decomposition at or below the SADT.
